

## ASSEMBLY INSTRUCTIONS

# Insulon® SAFETY GUARD

with Steinel HG 2320 E

Introducing a new way to reduce the risk of burn injury from hot air tools

1. This instruction is to install an Insulon Safety Guard onto a Steinel HG 2320 E heat gun with a 14mm reflector nozzle.

2. Remove the black plastic cover by rotating it counter-clockwise and separating it from the heat gun.

3. Place the Safety Guard on a flat surface and insert heat gun nozzle into the Insulon safety guard.

4. Apply downward force until the Safety Guard reaches the backstop.

*Heat gun operators should always follow best practices for heat gun safety, including keeping the air inlet free from debris. Insulon Safety Guards are not intended to provide a tool-holding surface.*
